DETAILED ACTION

Election/Restrictions

Applicant's election of Group 1, claims 1-29 and 42-65 in the reply filed on 4/27/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 30-41, 66-99 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4-27-05.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 11/03/2003 has been considered by the examiner.

Specification

The abstract of the disclosure is objected to because it includes that which may be implied (see below). Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

[emphasis added]

Claim Objections

Claims 29 and 65 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claims are not further method steps and therefore do not further limit the parent claim as the instant are directed to an apparatus.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-29 and 42-65 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed method consists solely of the manipulation of an abstract idea and is not concrete or tangible. See *In re Warmerdam*, 33 F.3d 1354, 1360, 31 USPQ2d 1754, 1759 (Fed. Cir. 1994). See also *Schrader*, 22 F.3d at 295, 30 USPQ2d at 1459. In addition, the claim is devoid of any limitation to a practical application in the technological arts. The invention in the **body** of the claim must recite technology. If the invention, **in the body of the claim**, is not tied to technological art, environment, or machine, the claim is not statutory (see *Ex parte Bowman*, 61 USPQ2d 1665, 1671 (BD. Pat. App. & Inter. 2001). Also note MPEP

Art Unit: 3624

2106 IV 2(b). Examiner notes that this is not a precedential decision but it is being cited for its analysis of whether the claim is in the technological arts.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-29 and 42-65 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams (US 5933830).

Williams discloses a method for providing information over a communications network to a computer user by (abstract), gathering a plurality of information items relation to a subject, the information items including data items and content items (abstract), wherein of the data items includes the value of an attribute associated with the subject for a particular date (column 2, lines 15-45)) and each of the content items includes a statement summarizing an occurrence for a particular date (column 2, lines 15-45 and column 3, lines 37-47); storing the information items and creating an electronic page containing in part a graphic representation that includes a number of data points corresponding to at least a portion of the data items, the data points arranged by date or date range (see column 2, lines 15-45, abstract, figures 1-4 and 7).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Saylors et al. (US 2004/0111370 A1) disclose a single source money management system. Flagg (US 6456979) discloses a method of evaluating a permanent life insurance policy. Bennett et al. disclose inductive transfer for text classification using generalized reliability indicators.
